solutions that fit.

GROWING GRACEFULLY

For decades, the Dallas-Fort Worth Metroplex has been an epicenter of economic opportunity in technology innovation, telecommunications, and the oil and gas markets. Located 30 miles north of downtown Dallas, Frisco was a small community that once absorbed into the metroplex, quickly became the fastest-growing school district in the United States. Frisco Independent School District's enrollment has surpassed 45,000 K-12 students, and they are adding 2,500-3,000 new students every year. It is no surprise that construction and remodeling have been occurring at a rapid pace, and that Frisco needed a partner that could help them meet the diverse needs of the burgeoning district. Interior Concepts has been one of those partners since 2003, working hand-in-hand on several building installations.

With so much expansion occurring in the technology-driven 21st century, Frisco ISD has been presented with the unique opportunity of implementing current learning concepts and educational technology. From the physical learning spaces, including the furniture, to the educational resources available, Frisco has made every decision based on how it would benefit the students' education. As a result, the district has online learning tools and classrooms designed to adapt as needs evolve. Yet with the yearly student influx, rethinking how classrooms and labs can maximize space is a constant challenge. Time and time again, Frisco's investment in high-quality flexible furniture has paid off because re-purposing Interior Concepts' furniture has been stress free — the furniture can be reconfigured and still look like new.

Overall, Frisco ISD's furniture needs have been far from cookie cutter, especially in its Career and Technology building. With highly specialized classrooms to handle computer animation, culinary education, drafting, education theory, and graphic design — the vocational training facility has a wide variety of different needs. Interior Concepts worked directly with Frisco to address each unique situation and develop solutions that met the vision of the staff. The variety of the furniture on-site, built from the same basic components of either tables or frames, worktops, and panel inserts, is amazing. Every learning space delivers the best furniture for expanding knowledge in that discipline.

The Administration building was also a huge challenge with demands for many different spaces — from reception areas and human resources to student services and accounting. This required different workstation layouts, cubicles, tables, and panel walls to provide a combination of privacy, collaboration, teaming, breakout areas, or re-configurability for department expansion. Often "meeting" Frisco ISD staff online, Interior Concepts utilized the web to collaborate on color choices, edit designs, or show what a finished product would look like in the finished space. This ensured the final product, upon installation, was exactly what Frisco wanted and needed for each area of the facility.

Flexible furniture solutions is what Frisco ISD required from Interior Concepts, but they also received a partner that worked diligently tailoring furniture for their students and staff. The long-term track record of delivering high-quality reconfigurable furniture to Frisco stands as a testament to Interior Concepts' promise of delivering the best furniture buying experience in the industry — and this relationship is slated to continue growing along with the district.

“Interior Concepts has been a pleasure to work with. Their product is of wonderful quality and has longevity. Reconfiguring has also been really beneficial to our district — as well as their ideas for specialized classrooms. Not all campuses are cookie cutter, and their product has met all our needs. I highly recommend Interior Concepts.”
